

# HERMES BONDED ABRASIVES WITHOUT NAPHTHALENE

**Patented technology for the production of highly porous bonded abrasives with Naphthalene-free pore formers**

## The advantages

- Market-leading, established technology for the substitution of the pore-forming agent Naphthalene in the production of bonded abrasives
- Elimination of this hazardous substance, which is harmful to health and the environment, while maintaining consistent surface results
- High process reliability during grinding thanks to particularly homogeneous microstructures
- Adjustment of open structures in a wide porosity range from 20 to 70 percent by volume – even with large tools

**Very high  
porosity without  
Naphthalene**

**Permanent  
availability**

## Take another step toward sustainability with us

- Switch to the Naphthalene-free Hermes alternative now
- Test products are available at short notice
- If required, our experienced application experts will accompany your changeover and will be happy to support you with the further optimization of your processes
